

Preparing for a Nasal Swab

Your nurses and doctors need to help find out what germs are making your body sick.

The nurse will put a thin Q-tip inside your nose and move it around for a few seconds.

The Q-tip is soft. Most kids say this is uncomfortable but is over very fast!

Please let us know if you have any questions! Thank you for being so brave! This will help us figure out more about why you are sick and how we can help you feel better!
